an open source all in one workspace, an operating system for all the building blocks of your team wiki, management and digital assets and a better alternative to Notion and Miro.

Own your data, with no

Local-first & Real-time

The idea proposed by Ink & Switch in the famous article about you owning your data, despite the cloud. Therefore, AFFiNE is the first all-in-one workspace that keeps your data ownership with no compromises on collaboration and editing experience.

A local-first application upon CRDTs with real-time collaboration support. Your data is always stored on multiple nodes remain synced in real-time.

Tools that assemble your next docs, tasks kanban or board

A large overlap of their atomic "building blocks" between these apps. They are neither open source nor a plugin system like VS Code for contributors to customize. We want to have something that contains all the things we love and goes one step further.

Building AFFiNE to be a fundamental open source platform that contains all the building blocks for docs, management and visual collaboration, hoping you can shape your next workflow with us that can make your own and also connect others, too.

Want to learn more about the product design of AFFiNE, here goes the concepts:

Do not to adapt. AFFiNE is built for individuals & teams who care about their data, who refuse vendor lock-in and who want to have control over their essential tools.

The canvas for blocks in any

For apps claimed to be a canvas for productivity. Since *the Mother of All Demos*, Douglas Engelbart, a programmable digital workspace has been a pursuit and an ultimate mission for generations of tool

makers. "Our tools and thereafter our tools shape us". A lot of pioneers have inspired us a long the way, e.g.:

Notion with their great concept of "everything is a block"

Trello with their Kanban

Airtable & Miro with their no-code programable datasheets

Miro & Whimiscal with their edgeless visual whiteboard

Remnote & Capacities with their object-based tag system
